

ArhamAawaaz

COMPLETE PRODUCT & TECHNICAL GUIDE

ArhamAawaaz — End-to-End Platform Documentation

AI Voice Calling & Multilingual Automation System Engineered for Insurance Advisors, Agencies & Brokers.

Document Version:
1.0.0

Platform Status: Production
Ready

Target Industry: Insurance (Health, Life,
Motor)

1. Executive Summary & Core Value Proposition

ArhamAawaaz is a specialized, AI-driven outbound voice calling and customer engagement platform built specifically for **Insurance Advisors, Independent Brokers, and Agencies** across India and global markets.

The Industry Challenge

Insurance advisors spend over 65% of their daily working hours making manual follow-up calls for policy renewals, lead qualification, and rollover reminders. With high call drop rates and language barriers, advisors lose high-value renewals to lapses.

ArhamAawaaz solves this by deploying conversational AI agents capable of speaking natural **Hindi, English, and Hinglish**. The platform automates mass dialing, follows customizable insurance script flows, captures customer intent, and logs structured outcomes—saving advisors up to 120+ hours per month.

Key Differentiators & Platform Capabilities

AI Engine

Multilingual Voice Bots

Human-sounding conversational AI agent ("Deepali") capable of fluidly speaking Hindi, English, and Hinglish with contextual insurance knowledge.

Data Upload

Bulk Excel & CSV Import

Seamlessly import customer lists from Excel (.xlsx/.xls) or CSV files with auto-detection of Name, Phone, and Insurance Category fields.

Finances

Dual-Currency Wallet

Integrated billing with Razorpay (INR + GST) and Dodo Payments (USD Merchant of Record) supporting instant wallet top-ups.

Cross-Platform

Web & Android App

Built using React 19 + Vite for web browsers and Capacitor JS for native Android deployment on mobile devices.

Table of Contents

Section	Title	Key Topics Covered
Section 1	Executive Summary	Product Vision, Market Fit, Core Capabilities
Section 2	Module Architecture	Dashboard, Outbound Calls, Responses, Settings, Billing
Section 3	Insurance Workflows & Scripts	Health Renewal, Life Term Plans, Motor Rollover, Custom Prompts
Section 4	AI Voice Integration	Bolna API, Speech Synthesis, Webhook Call States, Transcripts
Section 5	Financial Engine & Billing	Razorpay (INR + GST), Dodo Payments (USD), Firestore Wallets

Section	Title	Key Topics Covered
Section 6	Technical Architecture	React 19, Vite 8, Firebase Functions v2, Capacitor Android
Section 7	Book Demo Lead Engine	Interactive Form, Automated Email Notification Trigger

2. Detailed Module & Application Architecture

The ArhamAawaaz interface is organized into five core functional modules accessible via a persistent navigation sidebar (desktop) or tabbar (mobile):

Module 1: Dashboard & Analytics (`Home.jsx`)

Provides real-time visibility into overall calling operations and performance metrics:

- **Total Calls Placed:** Total count of automated calls dispatched through the system.
- **Answer Rate & Duration:** Percentage of successfully connected calls and total talk time logged.
- **Call Queue Preview:** Real-time status of pending contacts waiting to be dialed.
- **Recent Executions List:** Live feed displaying completed calls, customer names, call duration, and AI-generated summary tags.

Module 2: Outbound Call Center (`CallPage.jsx`)

The core operational engine where insurance advisors queue and trigger automated calling campaigns:

- **Bulk Import Engine (`contactsFile.js`):** Parses Excel (.xlsx, .xls) and CSV spreadsheets using the `xlsx` library. Automatically standardizes columns for Name, Phone Number, and Policy Type.
- **Manual Lead Entry:** Quick form for single-contact immediate calling.
- **Campaign Customization:** Select target language (Hindi, English, Hinglish), script domain (Health, Life, Motor), and policy stage (New Policy, Renewal, Rollover/Port).
- **Live State Polling:** Tracks real-time status transitions: `queued` → `initiated` → `in-progress` → `answered` / `no-answer`.

Module 3: Call Responses & Transcripts (`Responses.jsx`)

Comprehensive repository of call outputs, transcripts, and intelligence:

- **Dual-Speaker Transcript View:** Line-by-line dialogue history between the AI Advisor ("Deepali") and the Customer, supporting Hindi Devanagari script rendering.
- **AI Executive Summary:** Automated extraction of key customer responses (e.g., *"Customer requested quote for 10L sum insured, call back at 5 PM"*).
- **Status Badges:** Visual indicators for Answered, Missed, Busy, and Failed calls.
- **Audio Playback:** Direct link/audio player for recorded call audio when enabled.

3. Insurance Domains & Pre-Built Script Engine

ArhamAawaaz comes out-of-the-box with tailored conversational scripts designed for insurance regulations, objection handling, and compliance requirement in India.

Supported Insurance Domains

Domain	Policy Stages	Key Dialogue & Objection Focus
Health Insurance	New, Renewal, Port	Sum insured evaluation, pre-existing disease disclosure, waiting-period credit retention, room rent limits, cashless network hospital explanation.
Life Insurance	New, Renewal, Upgrade	Term plan vs endowment comparison, Section 80C tax benefits, riders (accidental/critical illness), grace period reminders, auto-debit setup.
Motor Insurance	New, Renewal, Rollover	Mandatory third-party cover, Zero Depreciation add-ons, Engine Protection, No Claim Bonus (NCB) transfer during rollover, instant policy issuance.

Sample Script Structure (Health Policy Renewal – Hindi/Hinglish)

AI Persona: Deepali (ArhamAawaaz Advisor)

Greeting: "Namaste Priya ji, main ArhamAawaaz se Deepali bol rahi hoon. Aapki Health Policy Renewal ke regarding 2 minute baat kar sakte hain?"

Step 1 (Expiry Check): "Aapki policy agle hafte expire ho rahi hai. Expiry se pehle renew karne se aapka No Claim Bonus aur Waiting Period credit safe rahega."

Step 2 (Sum Insured Upgrade): "Kya aap kisi naye family member ko add karna chahte hain ya Sum Insured increase karna chahte hain?"

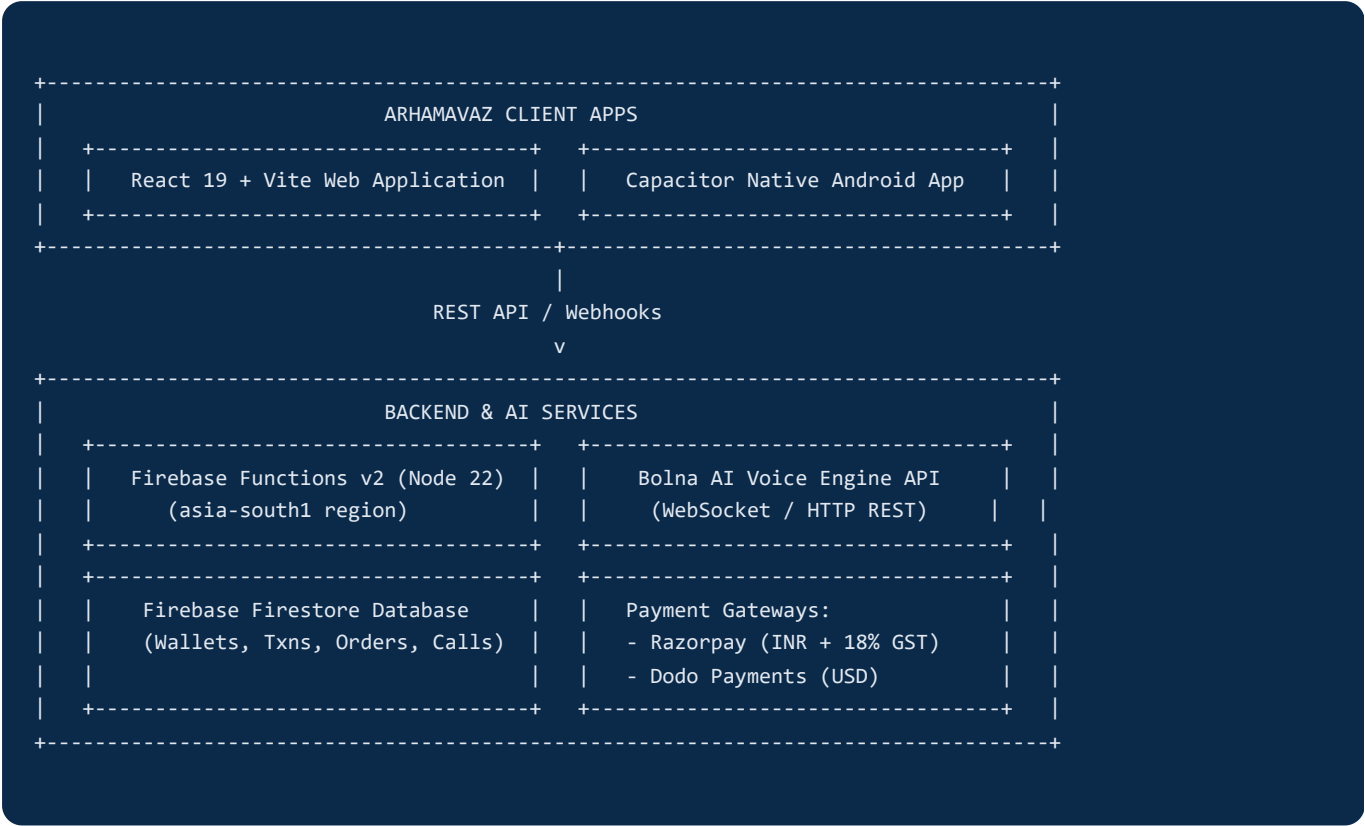

Step 3 (Outcome Capture): Confirm renewal willingness, preferred payment mode, and send payment link via SMS/WhatsApp.

Custom Script Editor (`SettingsPage.jsx`)

Advisors can customize the AI agent persona name, company branding, greeting templates, and prompt guidelines directly from the Settings tab without editing any code.

4. Technical Architecture, AI Engine & Financial Engine

System Architecture Diagram

Dual Financial Engine & Wallet Architecture

ArhamAawaaz implements a robust, multi-currency billing and wallet system managed via Firebase Cloud Functions(`functions/index.js`):

Feature	Razorpay Integration	Dodo Payments Integration
Currency	Indian Rupee (INR - ₹)	US Dollar (USD - \$)
Min / Max Top-up	₹1,000 to ₹10,00,000	\$50 to \$10,000
Tax Calculation	18% GST automatically added at checkout	Merchant of Record (MoR) automated tax
Security Verification	HMAC-SHA256 signature verification over <code>order_id payment_id</code>	Standard Webhooks HMAC-SHA256 signature verification over <code>id.timestamp.body</code>
Database Logic	Atomic Firestore transaction crediting wallet <code>balance</code> field	Atomic Firestore transaction crediting wallet <code>balanceUsd</code> field

5. Book Demo Lead Engine & Landing System

The ArhamAawaaz landing page (`LandingPage.jsx`) features a dedicated conversion funnel tailored to onboard new insurance agencies and brokers.

Interactive "Book Demo" Feature (`BookDemoModal.jsx`)

Replacing static CTA buttons, the **Book Demo** modal enables visitors to request a 1-on-1 personalized walk-through:

- **Lead Capture Form:** Collects Full Name, Work Email, Phone/WhatsApp Number, Target Insurance Segment (Health/Life/Motor), Preferred Date, and Time Slot.
- **Automated Email Trigger:** Upon form submission, the modal formats all lead parameters and triggers an instant email notification (<mailto:support@arhamavaz.com>) to alert the sales and onboarding team.
- **Confirmation Screen:** Displays an instant "Demo Request Received! 🎉" summary card displaying the booked date, time slot, and assigned advisor follow-up notice.

Conclusion & Deployment Checklist

Production Readiness Summary

ArhamAawaaz is fully engineered for scalability across web and mobile platforms. The code is modular, type-safe, optimized for low latency, and validated with zero syntax errors.

Component	Technology	Status
Web Client	React 19, Vite 8, CSS Custom Properties	Running at http://localhost:5173
Android Native App	Capacitor 8, Android Studio	Configured & Production Ready
Cloud Functions	Firebase Functions v2, Node 22	Configured (asia-south1)
Payment Gateways	Razorpay (INR) & Dodo Payments (USD)	Integrations Complete
Demo Lead Funnel	BookDemoModal, Email Notification	Active & Operational
